

# Abstract of the Disclosure

The object of the present invention is to provide a compound useful for the prevention and treatment of viral infectious diseases, and particularly liver diseases caused by HCV infection due to its having a high degree of replication inhibitory activity against HCV, its production method, an intermediate compound useful for its production and a pharmaceutical composition containing these compounds, and the present invention relates to a compound represented by the formula (I):

(wherein A represents  $-(CH_2)_n-$ , etc.; B represents  $-(C=O)-$ , etc.; D represents  $-(CH_2)_m-R'$ , etc.; E represents a hydrogen atom, etc.; G represents  $-(CH_2)_p-J$ , etc.; bond Q represents a single bond or double bond; and R<sub>1</sub>, R<sub>2</sub> and R<sub>3</sub> may be the same or different and each represent a hydrogen atom, etc.), a prodrug thereof or a pharmaceutically acceptable salt thereof.
